

# HCX: the standard for immunization registry reporting.

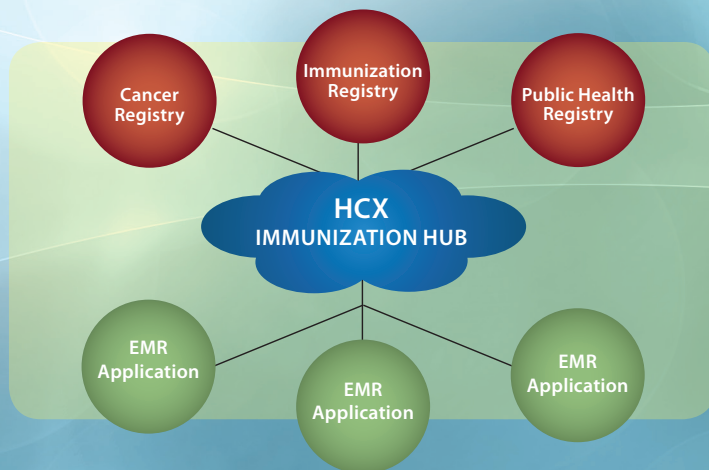

The government's Meaningful Use guidelines, Stage 2, specifies that providers must be able to submit immunization data electronically in a standardized format.

**HealthCareXchange (HCX)** provides a secure platform for transferring immunization data to immunization registries.

The HealthCareXchange immunization hub is designed to interface with most Electronic Health Record systems:

- If your EHR system has an immunization application built in, HCX can interface with that application and handle reporting to registries.
- For more robust capabilities, HealthcareXchange offers TheVaccinator for complete immunization management.

Each immunization registry has specific reporting requirements, and HCX meets those requirements to ensure complete, seamless transferral of data.

To find out more—and to discuss how HealthCareXchange can provide a cost-effective system for immunization registry reporting, call HealthCareXchange at 337-474-3200.

**HealthCareXchange** is a provider of healthcare connectivity and integration solutions designed to facilitate interoperability between healthcare providers, laboratories, hospitals and labs. Our products and services allow users to securely, seamlessly and quickly transport medical and patient information in compliance with Health Information Exchange (HIE) and the Direct Project's secure communication protocols and addressing mechanisms.

## Key Benefits of HCX Immunization Registry Reporting:

Interfaces with existing applications or provides standalone reporting app.

Meets specific reporting requirements of each registry.

Single data entry eliminates need to re-key data.
